DEMOGRAPHIC TRANSITION

Demographic transition is a process of change in a society's population. Every society is in a different stage in the transition model. Our model contains four stages with different characteristics in each stage. Explain each stage including an example of a country in each stage and an example of what a population pyramid would look like for each stage.
1. Which stage has the fewest number of countries in the modern world? Explain why this is true.

2. What social changes push a country into stage 3?

3. What social changes push a country into stage 4?

4. What stage do you believe the United States is in today? Explain.
